CAPABILITIES

Product & Architecture

Requirements analysis · Solution design · Roadmap & scoping · Stakeholder alignment · Technical documentation

Leadership

Team leadership (10+) · Engineering enablement · Code review · Technical mentorship

AI-First Delivery

Claude Code · OpenAI API · Gemini CLI · Windsurf · Devin · Google Jules · Tabnine · Replit · Prompt engineering · Agentic workflow design · AI code review & quality gates

Cloud & Infrastructure

Azure (Container Apps, Log Analytics, VM, Dev Pipeline) · AWS (EC2, ECS, S3, Kendra, CodeCommit, CodePipeline) · Vercel · Supabase · WireGuard · nginx · CI/CD

Engineering

Java · Spring · Struts2 · Hibernate · Microservices · REST APIs · JavaScript/TypeScript · React · React Native · Next.js · Express.js · Python · Flutter

Data & Tools

MySQL · PostgreSQL · Redshift · Supabase · Git · Maven · Postman · Insomnia · IntelliJ

EDUCATION

Master of Computer Applications

Rajasthan Technical Univ. / 2020

Bachelor of Computer Applications

Jagannath University / 2018

— PROFILE

Technical Product Architect with **6+ years** across software architecture, cloud infrastructure, and AI-assisted engineering. Operates at the seam between product and delivery — owning requirements, scoping systems, and leading the teams that ship them. Evaluated and rolled out Channelplay's **AI-first development model** organization-wide, and currently leads a 10-person team migrating legacy Struts2 platforms to a modern React/Next.js stack.

— EXPERIENCE

Channelplay Ltd.

MAY 2022 — PRESENT

- Technical Product Architect
- Technical Architect
- Sr. Software Engineer
- Software Engineer

MAY 2026 — NOW
APR 2025 — MAY 2026
APR 2023 — APR 2025
MAY 2022 — APR 2023

Three promotions in four years. Scope expanded from feature delivery to owning the product-to-production lifecycle across Channelplay and its group companies — Easyfix, Audecy, Fidelity.

PRODUCT & TEAM LEADERSHIP

- Lead a **10-person team** (8 engineers, 2 QA) across the full delivery lifecycle — scoping requirements, sequencing releases, setting the architecture, and reviewing implementation.
- Own product-to-delivery for platforms serving Channelplay and its group companies, translating business requirements into technical scope and aligning sales, operations, and engineering on tradeoffs.
- Evaluate architecture options against real cost and infrastructure constraints, driving decisions jointly with DevOps and business stakeholders.

AI-FIRST TRANSFORMATION

- Led Channelplay's **organization-wide shift from manual development to an AI-first model** — personally evaluated the tooling landscape (Devin, Windsurf, Claude Code, Gemini CLI, Google Jules, Tabnine, Replit) before standardizing the stack.
- Established the delivery workflows, review gates, and quality bar for AI-generated code; onboarded and enabled engineering teams on the new model.
- Introduced **Vercel and Supabase** to Channelplay as the platform foundation for AI-assisted delivery, replacing heavier legacy infrastructure.
- Direct and review AI-generated implementations across the stack, owning architecture, correctness, and code quality.
- Built **EasyRank**, an internal SEO tool using SERP APIs to track keyword rankings on a weekly schedule or on demand.
- Developed a **Google Ads campaign management skill** letting the marketing team run full-lifecycle campaigns through natural language — with credential persistence, dry-run previews, and checkpoint-based recovery.

PLATFORM MODERNIZATION — EASYFIX

- Leading the full revamp of the **Easyfix ecosystem** — website, technician mobile app, and client portal — migrating a legacy Struts2 monolith to a modern React / React Native / Next.js stack, delivered end-to-end through AI-first workflows.

SYSTEMS & INFRASTRUCTURE

- Part of the **AWS-to-Azure migration team**, working alongside DevOps to move production workloads across cloud providers.
- Architected cloud-native applications across Azure, AWS, and Vercel; optimized Vercel edge middleware routing to cut latency for users on ISP-constrained networks.
- Reduced Azure Container Apps log-ingestion costs through analysis of Log Analytics workspaces, isolating the two services driving ingestion volume.
- Proposed and designed a **WireGuard-tunnelled bridge** giving Azure Container Apps access to LAN-connected printers on a VPN network — a cost-viable alternative to a managed VPN gateway.

SHIPPED PRODUCTS

- Automated interview-calling system** (Java + OpenAI) — real-time question generation and audio delivery over WebSocket.
- WhatsApp recruitment chatbot** (Meta APIs + GPT) for Apple iPro — conversation logic, webhook processing, privacy compliance.
- Personalized support bot** on AWS (Kendra, S3, CodeCommit) — query analysis and tailored response generation.
- Biometric attendance platform** (Java, Hibernate, Matrix COSEC APIs) with payroll synchronization, deployed across Channelplay and its group companies — Audecy, Easyfix, Fidelity.

Yatra Online Pvt. Ltd.

FEB 2020 — MAY 2022

- Software Development Engineer I
- Software Engineer — QA
- QA Intern

NOV 2021 — MAY 2022
AUG 2020 — NOV 2021
FEB 2020 — AUG 2020

- Integrated **Zaakpay, Paytm, and ICICI payment gateways** into Yatra's booking platform, expanding payment coverage and meeting PCI compliance requirements.
- Automated daily payment reconciliation reporting via scheduled Cron jobs, replacing a manual process.
- Built **Selenium regression suites** across web and mobile booking flows, improving release reliability and reducing manual QA cycles.
